The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as lacalised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and CRAS disconcess.
                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed

XX Wovel secreted or transmembrane protein and polynucleotide encoding the protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis protein, useful for diagnosis and treatment of neurological disorders, cancer, autoimmune diseases, bone disorders and lung or liver fibrosis.

XX The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary decaytibonucleic collem manualian proteins. (I) are useful for preventing, treating or amedical condition, especially immunological treatment or collem manualian proteins. (I) are useful for preventing, treating or amedical condition, especially immunological treatment or collem manualian proteins. (I) are useful for preventing and activity relating to angiogenessis, cytokine, cell proliferation, cell differential for preventing or amedical condition, especially immunological treatment or corrections. (I) can be used to augment or replace activities. (I) can be used to manupulate stance or augment or replace cells damaged by illness, autoimmune disease, accidental damages or genetic disorders. (I) induces the proliferation of neuropathies, such acceptance or peripheral nervous system diseases and neuropathies, such acceptance or septementation of new and branches. (I) is involved in chemotractic or c

This sequence encodes a human secreted protein of the invention.

This DNA sequence was isolated from a human adult brain cDNA

This DNA sequence was isolated from a human adult brain cDNA

Thisary, and was designated clone bv227_1. The DNAs and proteins

are predicted to have biological activities which would make them

suitable for treating, preventing or ameliorating medical conditions in

humans and animals, although no supporting data is given. Suggested

cutivities include nutritional sources or supplements, immune

stimulating or suppressing activity, haematopolesis regulating activity,

tissue growth activity, activin/Anhibin activity,

chemotactic/chemokinetic activity, haemostatic and thrombolytic activity,

receptor/ligand activity, anti-inflammatory activity, cadherin/tumour

invasion suppressor activity, anti-inflammatory activity, and elusion from activity. The DNAs

are also stated to be useful for gene therapy. A host cell transfected

with the DNA, or its subfragments and variants is useful for recombinant

production of the human secreted protein clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ATGGAAGAAATGAAGCTAGTAGACTCCAAGCATGGTCAGCTCATCAAGAATTTACAATA 1385
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  40

The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping expressed genes (II) is useful in gene therapy techniques of for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving consistency of (II) or to treat disease states involving a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in cappositics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and cand to produce other types of data and products dependent on DNA and cand ocid sequences. AASfelf-Arbarbace of the invention.

Conditional sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           276

```
The present sequence encodes a human scavenger receptor, designated SRCL-P1. The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, dlabetic complications, bacterial infection and restenosis following angloplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into
                                                                                                                                                                                                                                                        New Scavenger receptor proteins SRCL-P1 with collectin-like structure, useful for treatment and diagnosis of diseases associated with oxidized low-density lipoprotein accumulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1453
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          . 09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1334 ATGGAAGAAATGAAGCTAGTAGACTCCAAGCATGGTCAGCTCATCAAGAATTTTACAATA 1393

```
This sequence encodes the human cellular stress response 1 (CSR1) protein of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and diagnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1530 CTGCTCAGTGCCCGGCTGGACCTCCAACGTCCGGAACCTCTCCATGATCGTGGAGGAGATG 1589

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: CAPPELLO, Joseph
APPLICANT: FERRARI, Franco A.
TITLE OF INVENTION: High Molecular Weight Collagen-Like
TITLE OF INVENTION: Protein Polymers
NUMBER OF SEQUENCES: 135
CORRESPONDENCE ADDRESS:
ADDRESSEE: FLEHR, HOHBACH, TEST, ALBRITTON & HERBERT
STREET: 4 Embarcadero Center, Suite 3400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30

Patent No. 5773249
GENERAL INFORMATION:
APPLICANT: CAPPELLO, Joseph
APPLICANT: FERRARI, Franco A.
TITLE OF INVENTION: High Molecular Weight Collagen-Like
TITLE OF INVENTION: Protein Polymers
NUMBER OF SEQUENCES: 135
CORRESPONDENCE ADDRESS:
ADDRESSEE: FLEHR, HOHBACH, TEST, ALBRITTON & HERBERT
STREET: 4 Embarcadero Center, Suite 3400
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                756

| Patent No. 5973120|
| CENERAL INFORMATION:
| GENERAL INFORMATION:
| APPLICANT: Recders, Stephen T
| APPLICANT: Morrison, Raren E
| APPLICANT: Hudson, Billy G
| TITLE OF INVENTION: Alpha-3 Chain Type IV Collagen Polypeptides
| FILE REFERENCE: 951263A
| CURRENT APPLICATION NUMBER: US/08/399, 889B
| CURRENT FILING DATE: 1995-03-07
| EARLIER APPLICATION NUMBER: 07/621091
| EARLIER FILING DATE: 1990-11-30
| NUMBER OF SEQ ID NOS: 25
| SOFTWARE: PatentIn Ver. 2.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                              1 MQQDLMRSRLDTEVANLSVI.......EDVNNFICEKDRETVLSSAL 342
